OTCI – Missing APIs for the backend team

1 November 2026

The current API (78 requests) covers the Ideas Day idea platform: sign-up, idea submission, reviewing submissions, idea forms and admin accounts. It does not cover the public website's other forms or anything the CMS edits, so those need new endpoints.

Public website

Four forms on the site submit nowhere today. Rows 1–4 block launch; the rest replace content that is hard-coded in the site.

#	Needed for	Suggested endpoint	Fields sent	Priority
1	Share feedback (14 buttons + floating button)	`POST /api/v1/public/feedback`	`mda_id` (from MDA list), `type` (complaint, commendation, suggestion), `experience` (min 10 chars), `name` (optional), `email` (optional)	High
2	Contact Management Services	`POST /api/v1/public/contact-requests`	`mda` (free text), `need` (process redesign, job evaluation, staff establishment, management consultancy), `details` (min 10 chars), `email`	High
3	Newsletter sign-up (footer)	`POST /api/v1/public/newsletter`	`email`	High
4	Reform reports downloads	`GET /api/v1/public/documents`	Returns title, description, department, file URL	High
5	News & updates	`GET /api/v1/public/news`	Returns title, tag (event, press release, reform update), image, date, link	Medium
6	Gallery photos	`GET /api/v1/public/gallery`	Returns folders, each with title, description, images	Medium
7	Press briefing videos	`GET /api/v1/public/videos`	Returns title, video URL	Medium
8	Idea submission without login	`POST /api/v1/public/ideas`	`title`, `area` (4 choices), `description` (min 20 chars), `email`	Only if the site keeps its anonymous form

#	Needed for	Suggested endpoint	Fields sent	Priority
9	Service charters on the BOS page (find an MDA, services, times, fees)	GET /api/v1/public/charters	Returns published charters in the CMS charters.json shape	Medium
10	Page copy edited in the CMS (hero text, impact numbers, highlights, department pages)	GET /api/v1/public/pages/{page}	Returns the published, visible sections of a page	Medium
11	Quarterly service performance ratings (BOS page)	GET /api/v1/public/performance?period=	Returns each MDA's rating for the period, built from feedback (row 1)	Low (sample figures are shown today)

Row 8 is a product decision: the site's idea form needs no login, but the current submit endpoint requires one. If the site adds sign-up and login pages instead, row 8 is not needed.

CMS (OTCI Studio)

The CMS edits website pages, service charters and the gallery, and none of these have an API. All endpoints below need the admin token. The same content then feeds the public `GET` endpoints above.

#	CMS screen	Needed for	Suggested endpoint
1	Login	Send a 6-digit code to a work email	`POST /api/v1/admin/auth/otp/send`
2	Login	Verify the code and return a token	`POST /api/v1/admin/auth/otp/verify`
3	Pages	List pages with their sections	`GET /api/v1/admin/pages`
4	Pages	Get one page (draft and published versions)	`GET /api/v1/admin/pages/{page}`
5	Pages	Save a section draft	`PUT /api/v1/admin/pages/{page}/sections/{section}`
6	Pages	Reorder, show/hide, delete sections	`PUT /api/v1/admin/pages/{page}/sections/order`, `PATCH …/sections/{section}`, `DELETE …/sections/{section}`

#	CMS screen	Needed for	Suggested endpoint
7	Pages	Discard a section's draft	`POST /api/v1/admin/pages/{page}/sections/{section}/discard`
8	Pages	Send for review / withdraw	`POST /api/v1/admin/pages/{page}/review`, `DELETE …/review`
9	Pages	Publish a page	`POST /api/v1/admin/pages/{page}/publish`
10	Pages, charters	Upload an image or PDF for content	`POST /api/v1/admin/media/upload` (returns URL), or let the existing POST /api/v1/public/media/upload accept the admin token (today it takes only a citizen token, for idea attachments)
11	Service charters	List, create, get, update, delete	`GET/POST /api/v1/admin/charters`, `GET/PUT/DELETE …/charters/{id}`
12	Service charters	Publish, move to drafts, mark coming soon	`POST /api/v1/admin/charters/{id}/status` (`published`, `draft`, `coming`)
13	Service charters	Attach the signed SLA PDF	`POST /api/v1/admin/charters/{id}/source`
14	Media library	List, create, rename, delete folders	`GET/POST /api/v1/admin/gallery/folders`, `PUT/DELETE …/folders/{id}`
15	Media library	Show/hide a folder	field on `PUT …/folders/{id}` (`visible`)
16	Media library	Upload, delete images, set cover	`POST …/folders/{id}/images`, `DELETE …/images/{image}`, `PUT …/folders/{id}/cover`
17	Activity	Activity log (who did what, when, on which page)	`GET /api/v1/admin/activity?department=`
18	Overview	Dashboard numbers	none needed if rows 3, 11, 14 and 17 exist

The charter body should use the same JSON shape as the CMS export (`charters.json`): services, turnaround, cost, fee tables, mandates and the service promise. The CMS repo's `cms/src/data/charterSeed.js` has a full example.

Changes to existing endpoints

These endpoints exist but don't fit what the screens do.

Endpoint	Problem	Change needed
`POST /api/v1/admin/invitations`	No department; roles are `admin` / `super_admin`	Add `department` (BOS, C&I, Reforms, MCSD, all) and an `editor` role, or confirm `admin` = editor
`GET /api/v1/admin/admins?view=unified`	Rows have no department	Return `department` on each row
Remove an admin	Only deactivate exists	Add `DELETE /api/v1/admin/admins/{code}`, or confirm deactivate is enough
`GET /api/v1/admin/mdas`	Charters aren't linked to MDAs	Add `mda_id` to charters so the feedback form's MDA list and charters match
`POST /api/v1/public/auth/login` (admin)	Shared with citizen login; response has no `is_admin`	Add `is_admin` to the response, or a separate admin login
`/admin/submissions/*`	Missing the `/api/v1` prefix used everywhere else	Confirm the real path
Paginated lists	Docs say `pagination`, examples show `meta`	Confirm one key
`POST /api/v1/public/invitations/accept`	Two body shapes (`full_name` vs `first_name` + `last_name`)	Confirm one
